Summary

Detail-oriented Software Engineering undergraduate (3.5 CGPA) passionate about building scalable software and responsive web applications. Equipped with a solid foundation in OOP using Java and C++ , as well as modern web technologies like HTML5 and CSS3. Looking to apply my problem-solving and coding skills to a dynamic development team.

Education

Comsats Institute of Information TechnologyBSSE • 3.5
Software EngineeringLahore • 01/02/2025 to Current

Experience

CodeAlphaRemote
Java Programming InternDec 2025 – Jan 2026

- Completed an intensive Java development internship focusing on **Object-Oriented Programming (OOP)** and backend logic.
- Developed four production-ready applications, including an **AI Chatbot**, **Hotel Reservation System**, and a **Student Grade Tracker**.
- Implemented core Computer Science concepts such as **Data Structures (ArrayLists)**, **File I/O** for data persistence, and **JavaFX** for GUI design.
- Managed all project source code using **Git and GitHub**, ensuring clear documentation and version control history.
- Demonstrated strong problem-solving skills by architectural design of logic-heavy features like real-time search and automated billing.

Projects

Smart Cafeteria System
Developed a system using Java and JavaFX to manage food inventory and orders. Applied advanced **OOP principles** for modular code. Enhanced the user experience with **custom CSS** and integrated robust input validation to prevent errors.
[\[GitHub\]](#)

Train Seat Booking System
Developed a terminal-based seat reservation system using C++. Implemented custom logic for **dynamic seat allocation** and used **File Handling** to ensure booking data persists after application restarts. Optimized search functionality to allow instant seat identification via unique IDs.

Student Grade Tracker (GUI & I/O)
Engineered a Java tool using **ArrayLists** to analyze student scores and generate performance reports. Features a user-friendly **GUI** for data entry and utilizes **File I/O** for persistent data storage. Implemented data validation logic to ensure accurate grade calculations and record integrity.

Moshify Website (HTML5, CSS3)
Designed and developed a responsive landing page website inspired by Code with Mosh's "Moshify" project. Implemented modern web design practices, semantic HTML structure, reusable CSS components, and responsive layouts for desktop and mobile views.
[\[Live Demo\]](#)

AI Chatbot (GUI & I/O)
Developed an interactive chatbot using **Natural Language Processing (NLP)** techniques and rule-based logic to respond to FAQs. Implemented a **Graphical User Interface (GUI)** for real-time interaction and integrated **File I/O** to maintain conversation logs.

Stock Trading Platform
Architected a trading simulator in **Java/C++** to visualize real-time market fluctuations and execute buy/sell orders. Leveraged **Object-Oriented principles** to model user portfolios and transaction histories, ensuring high modularity within a logic-heavy environment.

Skills

🔗 **C++**
Advanced
Data Structures, Object-Oriented Programming (OOP)

🔗 **Web Technologies (HTML5 & CSS3)**
Advanced
Responsive Layouts, Semantic HTML, Front-end Development, Web Design, JavaScript

🔗 **Version Control & Tools**
Git, GitHub, VS Code, Source Code Management

🔗 **Java**
Advanced
JavaFX, Application Development, Object-Oriented Programming (OOP)

🔗 **Python**
Intermediate
Academic Projects, Programming

🔗 **Core Engineering Skills**
Problem Solving, Logical Thinking, Debugging, Code Optimization, System Design

Certifications

Ultimate HTML5 & CSS3 Course
Code with Mosh
Completed comprehensive training on modern web design practices, semantic HTML structure, reusable CSS components, and building responsive layouts for desktop and mobile environments.
